Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Kastan et al. (4,545,691). Kastan et al. discloses a bottom bracket assembly for a bicycle comprising a spindle (60) that is rotatably held in an outer bracket portion (38,72) with two cartridge bearings, each bearing including outer and inner races, wherein the inner races (66) are fit onto said spindle and the outer races (70) are fit into said outer bracket portion, said inner races being fixed on said spindle in both axial directions by abutting inner and outer stop elements (see fig. 7), said inner stop element having a step and said outer stop element being a stop ring (36,94). Kastan et al. further discloses crank arms (10) received in adapting portions (34,92) of said spindle such that the crank arms abut against the outer stop elements in an axial direction. Kastan et al. discloses an outer race mounted in an outer bracket portion such that it is free to move in both axial directions where gaps are provided between the axial end surfaces of said outer race.

Response to Arguments

2. Applicant's arguments filed 11/14/03 have been fully considered but they are not persuasive.

Regarding claims 13, 17 and 21, it is clearly stated (column 7, lines 27-31) that there is slight longitudinal movement of the bearings. This meets the limitation of the claim stating that the outer race moves axially in both directions.

Regarding claim 22, figure 7 clearly shows adapting portions (34, 94), comprising stops, for receiving portions of the crank arms.

Conclusion

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
